Gāndharva Music and Its Basic Constituents: A Study

Pratyusha Ghosh

Department of Sanskrit, Purbasthali College, Parulia, Purba Bardhaman W.B., India

Abstract

The tradition of Indian music is phenomenal. Beginning with the *Sāmaveda*, it has flowed through various forms, each with its own specificity and nomenclature, such as *gāndharva mārṅa*, *deśī*, *dhrupada*, *kheyāla*, *thumri*, *tappā*, *bhajana*, *kīrttana*, *padāvalī*, *rāgamālikā*, *kṛti*, *padam*, *jāvalī*, and *tillānā*, among others. The *sāmagāna*, *gāndharva-saṁgīta* have been lost to the passage of time. But, in the present time, the Indian classical music, both Hindustani and Carnatic, bears historical lineage to the ancient *gāndharva* music. The music which is popularised by the *gāndharvas*, a community who had been the great connoisseur of music, is called, generally, *gāndharva* music. Bharata, the great writer of *Nāṭyaśāstra*, presented *gāndharva* music as “*svara-tāla-padātmakam*”, which means that music has been formed mainly with three components, they are – *svara* (musical notes), *tāla* (beat) and *pada* (meaningful words). Details of these three will be discussed in the paper.

Introduction

In the context of music, the great poet William Shakespeare once observed:

The man that hath no music in himself,
Nor is not mov'd with concord of sweet sounds,
Is fit for treasons, stratagems, and spoils,
The motions of his spirit are dull as night,
And his affections dark as Erebus.
Let no such man be trusted, Mark the music.¹

In the history of mankind it is found that music took its origin in man's lips even when language had not yet acquired its proper form. In this regard, Curt Sachs, the eminent ethnomusicologist opines that "[m]usic is older than language."² Herbert Spencer has made the following observation: "[t]he sounds which were the natural language of excitement, became the elements of song."³ In the course of discussion of ancient music- *śāstra* (scripture) it is noticed that ancient Indian music has two aspects according to its diction— one was called *Gāndharva* and the other was *Desī* (native). The present paper professes to explore the nature of *gāndharva* music through an analysis of its core components to bring out its significance in the development of Indian classical music.

Music is eternal; and India, from the very beginning, has nurtured it in her deepest consciousness. From the Vedic period to the present day, Indian music has flourished and developed in its own way. Instances are scattered across epics, dramas and different books. Among the eighteen *Mahapurāṇas*, musical references are evident in *Vāyupurāṇa*, *Mārkaṇḍeyapurāṇa*, *Agnipurāṇa*, *Vṛhaddharmapurāṇa*, *Viṣṇudharmottarapurāṇa*, *Lingapurāṇa*, and others. Among these, the *Vāyupurāṇa* is particularly significant for its extensive discussion of musical annotations and technical terminology of *Gāndharva* music.

In general, the music which is propagated by *Gandharva* is called *Gāndharva* music: "*Atyarthamiṣṭaṃ Devānāṃ Tathā Prītikaraṃ Punaḥ/ Gandharvāṇāmidam Yasmāt Tasmād Gāndharvamucyate*."⁴ In the Vedas, there are profound examples of citing the word 'Gāndharva'. In *Rgveda*, the word is used seventeen times in singular number. Also in *Atharvaveda* that number is sixteen. Here are the names of some of *Gāndharvas* – *Gāndharva-nārada*, *Svāti*, *Tumbaru*, *Kohalācārya*, *Śārdula*, *Śāṇḍilya*, *Viśvākhila*, *Viśvāvasu*, *Citrasena*,

³ Spencer, "On the Origin", p. 210.

⁴ *Nāṭyaśāstra* 28.9.

Bharatācārya, Dattila, Nandikeśvara etc. In the *Avesta*, the religious text of Zoroastrianism, the word ‘*Gandharva*’ is used. The main duty of *Gandharvas* was to protect *Somarasa*, a ritual drink secreted from *Soma* plants, from the *Asuras*. The great commentator Sāyaṇācārya denominates the *Gandharva* as: “*Gandharvo Raśmīṇāṃ Dhārakaḥ*.”⁵ Besides this, other examples of *gandharva* being attributed as a soma-protector are seen in *Ṛgveda* 9.113.3. According to Aitareya Brāhmaṇa, the *gāndharva* is included among the Viśvadevas (3.31; 13.7.31).⁶ The *Gāndharva* is also called as *Vāyukeśa* – “*Apāśyamatra Manasā Jagatvān Brūte Gandharvān Api Vāyukeśān*.”⁷ The *Gandharvas* are also presented as the protector of gods as well: “*Gandharvamitthā Padamasya Rakṣati Pāti Devānāṃ Janimānyadbhutaḥ*.”⁸

At another place, they are described in the form of the *Āditya* and as residents of *svarga* – “*Ūrdhvo Gandharvo Adhināke Asthād*.”⁹ According to *Ṛgveda* 9.86.36 and 10.40.4, the *gandharva* is the one who lives in the water with his wife, the *apsarā*. *Ṛgveda* 10.11.2 and 10.177.2 show the relation between *gandharva* and *vāṇī*. Affection for music is one of their defining characteristics, as expressed in “*Ramadgandharvī Rapyā Ca Yoṣaṇā Nadasya Nāde Paripātu Me Manaḥ*.”¹⁰ As per *Śatapatha Brāhmaṇa*, the number of *gandharva* is twenty seven – “*Gandharvāḥ Saptaviṃśatiḥ*.”¹¹ whereas in *Taittirīya Āraṇyaka*, their number is depicted to be eleven.¹² But number of *gandharva* in *Atharvaveda* is 6333.¹³ Use of the word *Gāndharva* is seen also in the *Rāmāyaṇa* and the *Mahābhārata* as well. It is asserted that they are experts in singing and dancing.¹⁴ In the *Atharvaveda*, it is written: “*Ye Śālāḥ Parinṛtyanti Sāyaṃ Gardabhanādinah/ Ānṛtyataḥ Śikhaṇḍinah Gandharvasyāpsarāpateḥ*.”¹⁵

Gandharvas are described as skilled in music in the Hāthigumphā rock inscription of Khāravēla, the emperor of Kāliṅga (2nd – 1st Century BCE): “*Tatiye Puna Vase Gandharvavedabudho Dupanaṭa/ Gītavāditasamḍasanāhi Usavasamājakārāpanāhi Kīḍāpayati Nagarim*.”¹⁶ As we discuss about the basic constituents of *Gāndharva* music, we can find *Svara* (musical notes), *Tāla* (beats) and *Pada* (meaningful words) are the key

components to it. Bharata Muni, in the *Nāṭyaśāstra*, tells about *Gāndharva* music as: “*Yattu Tantrīkṛtaṃ Proktaṃ Nānātodyasamāśrayam./ Gāndharvamiti Tajjñeyam Svaratālapadātmakam.*”¹⁷

Melodic Structure of Gāndharva Music: *Svara*

The importance of *svara* or the musical notes in Indian music cannot be ignored. Ignorance of *svara* can bring offence to the performer. As it is said by Nārada: “*Rksāmayajuramgāni Ye Yajñeṣu Prayujñate./ Abijñānāddhi Śāstrāṇām Teṣām Bhavati Visvara.*”¹⁸ According to Shringy, “[t]hat is called *svara*, which is by itself pleasing to the ear and the mind; which permeates the *śruti*-s; and which is tender and harmonic.”¹⁹ *Svara*, in fact, is a developed form of *śruti*. When a string of the *vīṇā* is plucked, the very first sound produced is considered to be *śruti* and the very next sound following it, which is the resounding of the *śruti* is called *svara*. It is also important to note that the *śruti* is essentially free from resonance, which is the essential characteristic of *svara*. A *svara* is thus inherently resonant. A perfect *svara* is produced when it is stuck at the exact *śruti* interval meant for that particular note.

Svara, or musical notes, are seven in number, they are - *Ṣaḍja*, *Rṣabha*, *Gāndhāra*, *Madhyama*, *Pañcama*, *Dhaivata* and *Niṣāda*. They are called *Svara-saptaka* together. The *Nāṭyaśāstra* states: “*Ṣaḍjaśca Rṣabhaśca Gāndhāro Madhyamastathā/ Pañcamo Dhaivatastathā Niṣādaḥ Sapta Ca Svarāḥ.*”²⁰ In this *Svara-saptaka*, two *svaras*, i.e. *sa* and *pa* cannot be changed, so they are called as *Acala-svara*. The other five *svaras*, such as – *ri*, *ga*, *ma*, *dha*, *ni* can be changed into *tīvra* (elevated) and *komala* (flat) forms. They are called *Sacala-svara*. These *tīvra svaras* are slightly higher in pitch than the *śuddha* or normal notes.

As stated earlier, *śruti* causes *svara*. Just as curd is the product of milk, the *svara* is also the product of *śruti*: “*Śrutayah Svararūpeṇa Pariṇāmaṃ Vrajanti Hi/ Pariṇāme Yathā Kṣīraṃ Dadhirūpeṇa Sarvadā.*”²¹ *Śruti* indicates the interval between the seven musical notes, as said by Ahobala: “*Śrutayah Syuḥ Svarābhinnāḥ Śrāvaṇatvena Hetunā/ Ahikuṇḍalavattatra Bhedoktiḥ Śāstrasammatāḥ.*”²²

¹⁷ *Nāṭyaśāstra* 28.9.

¹⁸ *Nāradyā Śikṣhā* 1.14.

¹⁹ Shringy, *Saṅgīta-Ratnākara*, p. 134.

²⁰ *Nāṭyaśāstra* 28.21.

²¹ *Vṛhaddeśī* 1.35.

²² *Saṅgītapārijāta* 38.

According to Bharata, *śrutis* are twenty two in number. *Ṣaḍja* note is known as a four-*śruti* note, *Rṣabha* comprises three *śrutis*, *Gāndhāra* is of two *śrutis*, *Madhyama* has four *śrutis*, *Pañcama* comprises four *śrutis*, *Dhaivata* is of three *śrutis* and *Niṣāda* is of two *śrutis*:

Catuḥśrutijbhavet Ṣaḍjaḥ Rṣabhastrīśrutih Smṛtaḥ

Dviśrutiścaiva Gāndhāro Madhyamaśca Catuḥśrutih.

Pañcamastadvadeva Syāt Trīśrutirdhaivato Mataḥ

*Dviśrutiśca Niṣādaḥ Syāt Ṣaḍjagrāme Vidhirbhavet.*²³

The *svara* is divided into four parts according to *śruti*— *vādī*, *saṃvādī*, *anuvādī* and *vivādī*. Bharata observes: “*Caturvidhattvameteṣāṃ Vijñeyaṃ Śrutiযোগতাহ/ Vādī Caivāyaṃ Saṃvādī Hyanuvādī Vivādyapi.*”²⁴

The *Vādī* is the most important and frequently used note. *Samvādī* occupies the second most important place and it follows *vādī*. For Example, in *Ṣaḍjagrāma*, *sa*, *ri*, *ga* and *ma* when sounded on strings can give the impression of being *pa*, *dha*, *ni* and *sa* respectively. If *sa*, *ri*, *ga* and *ma* are *vādī* then *pa*, *dha*, *ni*, *sa* are *saṃvādī*.²⁵ The notes which are located at the interval of two *śrutis* from one other are called *Vivādī*. The rest of the notes of a scale, when *vādī*, *saṃvādī* and *vivādī* are fixed, are called as *Anuvādī*.

A group of tones is called a *grāma* and it is the basis of *mūrccchanā*: “*Grāmaḥ Svarasamūhaḥ Syānmūrccchanā*”²⁶ *deḥ Samāśrayaḥ.*” Shringy elaborates the concept of *grāma* as it is “not merely a collection of musical notes, but a group of notes of relative tonal value organised into an integrated whole comprehending within its fold the span of a *saptaka*, a scale of seven notes which serves as the basis for musical compositions.”²⁷

In *gāndharva* music, three types of *grāma* were traditionally recognised: such as *Ṣaḍja-grāma*, *Madhyama-grāma* and *Gāndhāra-grāma*. But the use of *gāndhāra-grāma* has been abolished and is prescribed exclusively for divine contexts: “*Pravartate Svargaloke Grāmo*’sau Na Mahītale.”²⁸ Matarāṅga also declares: “*Ṣaḍjamadhyamasamjñau Dvau Grāmau Viśrutau Kila/ Gāndhāraṃ Nārado Brūte Sa Tu Matyairna Gīyate.*”²⁹ B. Chaitanya discusses the reason behind its extinction as follows : “[n]ow, in *grāma* the *madhyama* – which shown in be a very important note in ancient music – has only *one* consonant. Further the *pañcama*

²⁹ *Vṛhaddeśī* 91.

has no consonant note at all. So has only one consonant. Neither are the two terra chords balanced. There reasons might have contributed to the gradual disappearance of this scale.”³⁰

The *ṣaḍja-grāmic mūrccchanā* has been used in the *ābhyudāyik* (auspicious beginning) ceremony. It is described in the *Meghadūta* of Mahākavi Kālidāsa as:

*Utsaṅge Vā Malinavasane Saumya Nikṣipya Vīṇāṃ
Madgotrāṃkaṃ Viracitapadaṃ Geyamudgatukāma.
Tantrīrādrā Nayanasalilaiḥ Smārayitvā Kathaṅcit
Bhūyo Bhūyo Svayamadhikṛtāṃ Mūrccchanāṃ Vismarantī.*³¹

Grāma is the base of *Mūrccchanā*, as stated by Ahobala, author of the book *Samgīta-Pārijāta*: “*Mūrccchanādhārabhūtāste Ṣaḍjagrāmastrīṣūttamaḥ.*”³² He then elucidates it as the ascent and descent of notes within a *grāma* – “*Ārohaścāvarohaśca Svarāṇāṃ Jāyate Sadā/Tām Mūrccchanāṃ Tadā Loke Āhurgrāmāśrayaṃ Budhāḥ.*”³³

Nārādīkāra, identified by the scholars with Bharata, defines twenty one *mūrccchanās* in total following seven in each *grāma*. But practically there are seven *mūrccchanās* used in classical music. They are : *Uttaramandrā* for *ṣaḍja*, *Abhirudgatā* for *ṛṣabha*, *Asvagrāntā* for *gāndhāra*, *Sauvīrā* for *madhyama*, *Hṛṣyā* for *pañcama*, *Uttarāyatā* for *dhaivata* and *Rajanī* for *niṣāda*. Nārādīyā Śikṣā explains:

*Ṣaḍje Tūttare Mandrā Syādrṣabhe Cābhirudgatā
Asvagrāntā Tu Gāndhāre Trītyā Mūrccchanā Smṛtā.
Madhyame Khalu Sauvīrā Hṛṣyā Pañcame Svare
Dhaivate Cāpi Vijñeyā Mūrccchanā Tūttarāyatā.
Niṣādādrajanīm Vidyādrṣṇāṃ Sapta Mūrccchanāḥ.*³⁴

Varṇa is another part of *svara*. In the context of *varṇa* it is said in *Samgītapārijāta*: “*Gānakriyocyate Varṇaḥ.*”³⁵ *Varṇa* is of four types, such as – *Sthāyī* (fixed in one place), *Ārohī* (ascending), *Avarohī* (descending) and *Saṅcārī* (unsettled). The fundamental, stable section of a composition is called *sthāyī*. It involves the repeated singing of a single note within a small range, such as Sā Sā Sā Re Re Re Gā Gā Gā. It sets the basic character of a *rāga*. In khayāl, this *sthāyī* plays the main role establishing the core idea before exploring other musical avenues. *Ārohī varṇa* refers to an ascending melodic movement, such as Sā Re Gā Mā Pā Dhā

³⁰ Japp, *Ethnomusicology*, p. 229.

³¹ *Meghadūta*, Uttaramegha. 25.

³² *Samgīta-Pārijāta* 98.

³³ *Ibid* 103.

³⁴ *Nārādīyā Śikṣā* 1.2.11-13.

³⁵ *Samgītapārijāta* 219.

Ni. It is very important for forming fundamental pattern for voice training. It helps to control voice, aiding in accuracy of pitch. *Avarohī* describes the descending melodic movement. *Avarohī*, as well as *ārohi*, plays a crucial role forming the structure of *rāgas* by rendering a *raga* with appropriate emotion. Examples are: Sā Ni Dhā Pā Mā or Ni Pā Gā Re Sā. *Sañcārī varṇa* refers to a complex musical phrase that is a combination of *sthāyī*, *ārohi* and *avarohī*. It allows for rich exploration and ornamentation within a *raga*.

Alaṃkāra, or vocal exercise, is another fundamental component that aids in developing clarity in *svaras*. Example include: Sā Re Gā, Re Gā Mā, Gā Mā Pā... *Alaṃkāra* is considered to be the foundation of *varṇa*: “*Varṇaścatvāra Evaite Alaṃkāṛāstadāśrayāḥ*.”³⁶ As stated by Bharata, there are sixty three types of *alaṃkāras* based on four types of *varṇas*.

Jāti, in Indian music, classifies *rāgas* and defines their specific melodic rules through ten characteristics, such as – *Graha* (starting note of the melody), *Aṃśa* (the most dominant note), *Tāra* (use of notes in the higher octave), *Mandra* (use of notes in the lower octave), *Nyāsa* (the final resting note), *Apanyāsa* (secondary resting notes), *Alpatva* (less emphasized notes), *Bahutva* (emphasized notes), *Ṣaḍava* (use of six notes) and *Auḍava* (use of five notes).

Organization of Rhythm and Temporal Control: *Tāla*

Tāla, that is beat, is one of the fundamental elements in *Gāndharva* music. Above all *tāla* is the predominant and compulsory element of music. Nandikeśvara opines that the entire world is full of *tāla*: “*Tālātmakaṃ Jagatsarvaṃ Tālastu Vyāpakāḥ Smṛtaḥ*.”³⁷ Śārngadeva also emphases the importance of *tāla*: “*Mukhapradhānadehasya Nāsikā Mukhamadhyake/ Tālahīnaṃ Yathā Gītaṃ Nāsāhīnaṃ Mukhaṃ Tathā*.”³⁸ The term *tāla* is derived from the Sanskrit root *tal*, meaning ‘foundation.’ In *Samgīta-ratnākara*, it is said: “*Tālastal Pratiṣṭhāyāmiti Dhayordhaji Smṛtiḥ/ Gītaṃ Vādyam Tathā Nṛtyam Yatastāle Pratiṣṭhitam*.”³⁹

Bharata, the author of *Nāṭyaśāstra*, clearly says that he who is ignorant of *tāla* should not be considered as a singer or a musician: “*Yastu Tālaṃ Na Jānāti Na Sa Gātā Na Vādakaḥ*.”⁴⁰ The *tāla* involves divisions into *kalāpāta* (*kalā*) and *layas* (tempo)– “*Tālo Ghana Iti Proktaḥ Kalāpāta-layānvitaḥ*.”⁴¹ He describes about twenty types of *tāla* used in *gāndharva* music–

³⁶ *Nāṭyaśāstra* 29.20.

³⁸ Goswami, *Bhāratīya Uccāṃga Samgīta*, p. 162,

³⁹ Das Sharma, *Samgītamañiṣā*, p. 153.

⁴⁰ Ghosh, *Niḥśaṃka Śārngadeva*, p. 169.

⁴¹ *Nāṭyaśāstra* 31.1

*Avāpastvatha Niṣkrāmo Vikṣepaśca Praveśakaḥ
Śamyātālaḥ Sannipātaḥ Parivartaḥ Savastukaḥ.
Mātrāvidāryāṅgulayā Yatiḥ Prakaraṇaṁ Tathā
Gītayo 'vayavā Mārgo Pādabhāgāḥ Sapāṇayah.
Ityekaviṁśako Jñeyo Vidhistālagato Budhaiḥ.*⁴²

There are ten types of *prāṇa* of *tāla*, such as – *kāla* (time of music), *mārga* (used way), *kriyā* (activities), *aṅgam* (parts), *graha* (primary *mātrā*), *jāti* (number of *mātrā*), *kalā* (style), *laya* (interval time), *yati* (speed of *laya*) and *prastāra* (showing different gesture). As observed by *Makarandakāra* – “*Kālo Mārgakriyāṅgāni Grahojāti Kalālayaḥ/ Yatiḥ Prastārakaśceti Tālaprāṇā Dasasmṛtā.*”⁴³ According to *Nāṭyaśāstra*, there are three parts of *tāla*, such as *Yati*, *Pāṇi* and *Laya* – “*Aṅgabhūta Hi Tālasya Yati-Pāṇi-Layāḥ Smṛtāḥ.*”⁴⁴

Musical Articulation and Verbal Content: Pada

The word ‘*pada*’ refers to the verbal content of music. *Pada* is musically adorned by *svara* and *tāla*. In *Nāṭyaśāstra*, in the context of *pada*, it is said that all that is made up of syllable, is called *pada* – “*Yatkiñcidakṣarakṛtaṁ Tatsarvaṁ Padasaṁjñitam.*”⁴⁵ There are two types of *pada*, one is *nibaddha*, which is bound with metre, and the other is *anibaddha*, which is composition without metre – “*Anibaddhaṁ Nibaddhaṅca Dvividhantat Padaṁ Smṛtam.*”⁴⁶ *Anibaddha* *pada* is also known as *alāpa*.⁴⁷ The *pada* that is not regularly composed and is not furnished with any metre, is associated with the musical instrument (*ātodya*) – “*Apadānyanibaddhāni Tālena Rahitāni Ca/ Ātodyeṣu Niyuktāni Yāni Tāni Tu Yojayet.*”⁴⁸

Śārngadeva classifies music with its two categories, such as *Gāndharva* (classical) and *Gāna* (regional/deśī). *Gāna* is further divided into *Nibaddha* and *Anibaddha*. *Prabandha* is the primary form of the *nibaddha gāna*. He opines: “*Baddhaṁ Dhātubhiraṅgaiśca Nibaddhamabhidhīyate/ Ālaptirbandhanahīnatvādanibaddhamitīritā.*”⁴⁹

Prabandha music is a composition of six specific elements, such as *svara* (musical notes), *biruda* (aural words or phrases), *tenaka* (auspicious syllables used for ornamentation), *pada* (meaningful words related to the subject matter of music), *pāṭa* (syllables specially used

⁴² Das Sharma, *Samgītamañiṣā*, p. 47.

⁴³ Goswami, *Bhāratīya Uccāṅga Samgīta*, p. 273.

⁴⁴ *Nāṭyaśāstra* 31.530.

⁴⁵ *Ibid.* 32.26

⁴⁶ *Ibid.* 28.27

⁴⁷ Goswami, *Bhāratīya Uccāṅga Samgīta*, p. 152.

⁴⁸ *Nāṭyaśāstra* 32.32

⁴⁹ *Samgītaratnākara* 4.2.

for rhythmic music) and *tāla* (rhythmic cycles) – “*Prabandho ’ṁgāni Ṣaṭ Tasya Svaraśca Virudaṁ Padam./ Tenakaḥ Pāṭatālau Ca Prabandahpuruṣasya Te.*”⁵⁰

The *nibaddha* music has four *dhātus* (sections), such as – *Udgrāha* (the initial section, such as *maṁgalācaṇa*), *Melāpaka* (the connecting section between *udgrāha* and *dhruva*), *Dhruva* (the fixed section) and *Ābhoga* (the concluding section) – “*Prabandhāvayavo Dhātuḥ Sa Caturdhā Nirūpitaḥ/ Udgrāhaḥ Prathamastatra Tato Melāpakadhruvau./ Ābhogaśceti...*”⁵¹

According to *Samgītapārijāta*, there are five types (*jāti*) of *prabandha*, such as – *Medinī*, *Vidinī*, *Dīpanī*, *Vilambinī* and *Tārāvalī*. Ahobala observes:

Prabandhajātayaḥ Pañca Iti Proktāḥ Krameṇa Ca.

Ṣaḍbhiretairmedinī Syādvīdinī Pañcabhirbhavet

Caturbhirdīpanī Jātistribhiraṅgairvilambinī.

*Dvābhyāṁ Tārāvalī Jātiriti Sūri Vinirṇayaḥ*⁵²

Thus, a *prabandha* with six parts is called *medinī*, one with five parts is termed *vidinī*, a *prabandha* with four parts is called *dīpanī*, one comprising three parts is called *vilambinī* and *tārāvalī* has two parts.

Conclusion

The paper purports to establish the profound existence of *gāndharva* music in ancient Indian scriptures and as well as in the society. Over time, this very music has been modified by various schools and sects, and flourished with various characteristics. They acquired new names and enriched the flawless tradition of Indian classical music, however, their fundamental features remained unchanged, that is *Sāma-samgīta*, the mother of *gāndharva* music. Through this analytical study of *gāndharva* music with its core elements, that is *svara*, *tāla* and *pada*, it is hoped that the study will contribute to the finer aspects of ancient Indian music in the Sanskrit tradition.
